Technological Sovereignty for SMEs and farming communities

On-premise infrastructure, local AI and IoT hardware that free organizations from costly cloud subscriptions. Fusagasugá · Colombia → LatAm

PROBLEM

The "integration tax": pay forever, own nothing

Fragmented, costly SaaS

Cooperatives and SMEs stack foreign subscriptions month after month, with no control over their data.

Fragile infrastructure

Intermittent rural connectivity and zero local compute: no internet, no operation.

Talent gap

No practical training in AI, STEAM and digital transformation for teams and entrepreneurs.

SOLUTION

Sovereign ecosystems: buy technology, don't rent it

HARDWARE

Own IoT

Local sensors and nodes ("Crop Guardian") that run with or without internet.

SOFTWARE

Local AI

Agents and data engines (Apache Spark) running on the client's own servers.

PEOPLE

Media + STEAM

Audiovisual production and workshops that teach communities to run the system.

PRODUCT

Three lines, one ecosystem

AGRO-IOT

Crop Guardian

Environmental monitoring with ESP32/Raspberry Pi, anomaly detection and blockchain auditing. Working TRL6 prototype in Fusagasugá.

AI + BIG DATA

MetaSearch / Spark

Local knowledge engine over the client's private data — it never leaves their premises.

MEDIA

Production + STEAM

High-definition video and academies that educate communities and sell the solutions.

BUSINESS MODEL

CapEx, not SaaS: B2B & B2G

- **Who pays:** farming cooperatives, mid-size companies and local governments that must digitize without costly clouds or data risk.
- **How we charge:** 1) infrastructure consulting, design and deployment · 2) IoT hardware sales and installation · 3) media production and STEAM workshops.
- **Go-to-market:** direct B2B consulting, public-private bids and hyperlocal marketing ("digital godfather", WhatsApp SEO, Andean Cyberpunk).

MARKET

A growing BIC ecosystem

421
BIC companies in Colombia

43%
in Bogotá and region

65%
are micro-businesses

72%
services sector

GOFEST (Bogotá Chamber of Commerce): 40,000 attendees/year, GOMATCH platform connecting startups, investors and corporates across LATAM. Registered vertical: **AI**, **BIC** focus.

TRACTION

Built from action

TRL6
CultivaTech
Agro-IoT prototype in a real setting, Fusagasugá.

ALLIANCE
Chamber of Commerce
STEAM education + AI in Fusagasugá.

CALL
Viveros 2026
Technical-financial bid (Res. 102/2026).

PARTNER
Aslan Group SAS
Corporate Django web suite + CRM.

WORKSHOPS
Fusagasugá 2026
Own platform + KPI dashboard.

OUTREACH
FLISoL 2026
Talk on local HPC and data sovereignty.

GOVERNMENT
ICT Fusagasugá
Regional scale-up talks.

COMMUNITY
Tenores Found.
Validated tech sovereignty.

IMPACT · SDG 9

Industry, innovation and infrastructure

We track today

Sovereign nodes deployed · data volume processed locally (Spark) without leaving the client · people trained in STEAM.

Expected impact

% OPEX reduction after leaving SaaS · operational yield gains from local AI · rural mesh network expansion.

IDEAL CUSTOMER

Who buys and why

- **SME owners** and Andean farming cooperative leaders, frustrated by endless cloud costs.
- **Local government IT directors** who must digitize while protecting data and budgets.
- **Motivation:** stop renting technology forever; own a sovereign system with blockchain auditing and local AI over private knowledge.

TEAM

Art + science + technology

Lukas Moyano Morales — Founder

MA Visual Arts, tech-sovereignty consultant, on-premise AI and blockchain/Solidity (SENA 2026).

Team & allies

Technical network (HPC, IoT, AI), audiovisual production and allies such as Eng. Ricardo Moyano (Aslan Group SAS).

REAL STATUS

In market, bootstrapped

In-Market
stage: consulting and services running

0
paying customers (MVP stage)

Pilot
community: Workshops + SENA + STEAM

US$ 0
12-month revenue

Dilutive: $0 · Non-dilutive: $0. Growth via consulting, production and deployments.

THE ASK

Scale CultivaTech

We seek

Amount: [DATA US$] to scale product, team and pilots + allied network, mentorship and visibility.
