

TECHNOLOGICAL SOVEREIGNTY

Advanced Research & Sovereign Infrastructure

■ THE PROBLEM

Modern research in Colombia faces a **critical dependency** on foreign cloud services, leading to high operating costs (OPEX) and vulnerability in the privacy of sensitive data.

■ OUR SOLUTION

We implement **On-Premise** infrastructure and open hardware. We guarantee **Total Privacy** through local AI models and data sovereignty, eliminating information leakage to third parties.

■ SOCIAL & ECOLOGICAL IMPACT

We lead digital transformation in Sumapaz with **AgriTech** projects. We apply hardware **Upcycling** to reduce carbon footprint and democratize access to high-performance computing.

■ TECHNICAL CAPACITY

- **HPC Stations:** Workstations optimized for AI training and massive data processing.
- **Edge Computing:** IoT monitoring nodes for real-time precision agriculture.
- **Private Networks:** Mesh VPN infrastructure for secure and sovereign connectivity.

■ WORK MODEL

We facilitate academy-business integration through:

- Technical collaboration agreements.
- Provision of specialized consulting services.
- Development of TRL (Technology Readiness Level) projects.

■ THE DIFFERENTIAL

"We don't just sell technology; we build **Sovereignty**. Our infrastructure is owned by the client, without forced subscriptions or external control."
